

WANJET F24 Fogging machine

Wanjet F24 is specially designed for disinfection in food processing, stock buildings and livestock.

Wanjet F24 - Advantages:

- **Reduced labor time**
The unit runs unattended for up to 12 hours.

- **Minimized user exposure to chemicals**

It is only necessary to be present when filling the tank and starting the unit.

- **High capacity**

By means of the specially designed intake, air guides, and conically designed front, a very powerful air stream can be achieved.

- **High reliability**

All parts that come into contact with chemicals are constructed from polythene and stainless steel. Additionally, the chassis undergoes zinc plating to safeguard against rust formation. Cleaning the machine is easy due to its streamlined design, which incorporates a minimal number of components that have been custom-tailored for the machine's specific functionality.

Working principles

The unit works with ULV/LV principles. (ULV=Ultra Low Volume, LV=Low Volume). The small size of aerosol droplets means that coverage of the target area is achieved with a lower volume of liquid than with conventional methods. This allows the volume of carriers to be reduced. The small droplets fall down very slowly and are therefore able to be distributed evenly in the area by the forced air circulation.

Wanjet F24 positioned in an area of 60x24 m without any extra ventilators.

Technical Data F24

Capacity 0-30 l/h
Control unit timer 12 h
Reach 60 m
Tank capacity 60 l
Voltage 220-240 VAC
Fan capacity 5400 m³/h
Fan motor, power 370 W
Blower, power 1000 W
Dimensions, cm 130x70x165
Weight 41 kg

Wanjet fogging machines

Wanjet F24 belongs to the Wanjet F-series, which comprises a total of nine models. Within this series, you'll also find the Wanjet F10 and F15 models, specifically designed for disinfecting smaller areas and vehicles, among other applications.
